EXPERIENCE

Principal Financial Group

SOFTWARE ENGINEER I - II

June 2024-Current | Des Moines, IA (Remote)

- Created a high volume internal API using AWS Lambda and DynamoDB to store and deliver customer-facing data
- Managed team application operations during on-call shifts, actively monitoring metrics and escalating issues when needed.
- Built GitHub Actions workflows to automate the disaster recovery processes for our applications
- Designed and implemented a scalable sync solution using Typescript to keep data up to date using parallel asynchronous calls between several different internal APIs

SOFTWARE ENGINEERING INTERN

May 2023-June 2024 | Des Moines, IA (Remote)

- Upgraded and maintained multiple Amazon Web Services (AWS) applications that incorporate domain-driven design
- Created and maintained GitHub Actions workflows to automate the testing and deployment of applications
- Implemented AWS alarms to track errors and alert the team when they occur

Kiewit

SOFTWARE ENGINEERING INTERN

May 2022-August 2022 | Omaha, NE (Hybrid)

- Developed features to corporate applications while using scrum and agile development methodologies
- Worked with other interns on a scrum team to develop features on an existing application
- Added API calls and other functionality to a .NET application

University of Nebraska-Lincoln

SOFTWARE ENGINEERING TEACHING ASSISTANT

August 2021-May 2023 | Lincoln, NE

- Helped students in understanding and completing their coursework
- Assisted in directing and grading labs
- Explained difficult to understand concepts to first-time programmers

PROJECTS

PIZZA VISUALIZATION APPLICATION | Application for displaying pizzas within a pizza oven without the use of interior cameras

- Designed and created the user interface with JavaFX
- Coded the algorithm in Java for displaying pizzas within an oven with the use of exterior cameras
- Used webcam APIs to access, manipulate, and display images

Relvo Alloy | An application that uses machine learning to speed up the process of solving genetic algorithms in formal verification processes

- Created a reinforcement learning algorithm to optimize the speed of an existing formal verification software called [EvoAlloy](#)
- Successfully decreased the time needed for the formal verification to complete in many cases

EDUCATION

UNIVERSITY OF NEBRASKA-LINCOLN

BACHELOR OF SCIENCE

SOFTWARE ENGINEERING

GPA: 3.95

August 2020 - May 2024
